Primary and Junior Students are encouraged to .... Take the DreamBox Challenge!

DreamBox is an interactive web-based instructional math program with embedded assessments. The program evaluates student strategies and immediately adjusts each lesson. DreamBox can adapt the level of difficulty, scaffolding, sequencing, and the number of hints, allowing students of all levels to progress at a pace that suits them. Adaptive learning technologies extend the capacity of the teacher to individualize instruction and enhance learning. They provide students with appropriate, immediate feedback and teachers with real-time, action able data to improve clasroom management and productivity.

Having our primary and junior students engage regularly in the learning of the DreamBox program is part of our School Improvement Plan for mathematics. Students are encouraged to play on the Dream Box program for 20 minute intervals at a time. Research has shown significant learning occurs when children use the DreamBox program for 90 minutes or more each week.

Consequently, Dalewood is encouraging all primary and junior students to take the Dreambox Challenge! Staff are challenging students to log 6 hours or more of time on the DreamBox program during the month of January. Every time that your child goes on the DreamBox program, the program tracks the amount of time and lessons completed.

Please encourage your children to **TAKE THE DREAMBOX CHALLENGE!**
